```
<p>This is para 1</p>
   <p>This is para 2</p>
   <h1>This is h1 11111</h1>
   <p>This is para 3</p>
   <div>
       <p>This is para 1 inside div</p>
       <p>This is para 2 inside div</p>
       <h1>This is h1 11111 inside div</h1>
       <p>This is para 3 inside div</p>
       <article>
           <p>This is para 1 in article</p>
           <p>This is para 2 in article</p>
           <h1>This is h1 11111 in article</h1>
           <p>This is para 3 in article</p>
       </article>

   </div>
```

Gradient

Linear—goes up/down/left/right

Radial---defined by their center

Conic-rotated around the center

JavaScript

1. It is Scripting language

   Java Vs JavaScript

   | JavaScript | Java |
   | --- | --- |
   | It is a scripting Language | It is programming language |
   | It is object-based language | It is object-oriented language |
   | It is dynamically typed | It is statically typed |
   | It is event driven programming language | It is logic-based language |

The JavaScript code written in html file has to be enclosed in Script tag.
Script tag can be added in to <head> or <body> section of the html page
The script tag can appear any number of times in one html page

The JavaScript can be Internal/External JavaScript.

1. Internal JavaScript
   a. If the JavaScript code is written in html page, then it is internal JavaScript.
      ```
      <script>
          alert("hello");
      </script>
      ```
2. External JavaScript
   a. If the JavaScript code is written in external file, with extension .js, then it is called as external javascript
   b. To add this file inside html page use script tag

   Welcome.js
   ```
   alert("hello");
   ```
   to add this file in html page
   ```
   <script src="welcome.js"></script>
   ```
